

In rare cases, you may not have an internet connection and cannot have an internet connection for one reason or another. There is a way to license your software while your computer does not have an internet connection, but you will need another computer that does have access to the internet.

- 1. Open your license manager (if you don't know how or where, see: <u>Managing your Flexi</u> <u>License</u>).
 - o If you haven't already, enter in your activation code.
- 2. Your license Manager will appear as below. Write down the **Computer ID** exactly as it is listed including capitalization (it is located where you see the black field in the center of the image below.)

- 3. On a different computer that **has an active internet connection**, on your web browser go to **saicloud.com** and log in to your account.
- 4. Locate your your license and click on "Flexi" on the left or "Download" on the right-hand side.

6	Cloud	Software Files Approval	Jobs Account Settings			Login Settings Logcut

computer the license is on. Then click Create License Now.

Create License

Go Back

Your software will be licensed to be used on the computer with the matching Computer ID. This license will not work on another computer.

Computer ID	211708FTHB7A		
Computer Name	Production Computer		
	Create License Now		

7. You'll then be returned to the License ID screen. Click **"Download License."** The software will download a .lsn file. Using a thumb drive or some kind of transfer media, return it to the computer without an internet connection.
